

A 302 status code is an HTTP response that means "Found" and indicates a temporary redirect.

The screenshot shows the Chrome DevTools Network tab. The address bar contains the URL: `https://web.facebook.com/geoff.stow.96?_rdc=1&_rdr#`. The page title is "ITO (Philippines) -...". The Network tab is selected, and the "No throttling" dropdown is visible. The network log shows two requests:

Name	Status	Type	Initiator
geoff.stow.96	302	document / Redirect	Other
geoff.stow.96?_rdc=1&_rdr	200	document	www.facebook.com/geoff.stow.96

The status code "302" in the first row is circled in red.
